Chlorinated Ethenes Since the 1930s, these solvents have been used in dry cleaning operations and degreasing applications due to their non-flammable and chemically stable nature. Unsafe disposal practices have led to widespread environmental contamination.

Permeable Reactive Barrier with Zero-Valent Iron To capture and treat the chlorinated ethene plume flowing from an up-gradient source, IRSL designed and supervised the installation of a 40 m long Permeable Reactive Barrier (PRB), which used Zero-Valent Iron, in a silty sand unconfined aquifer.

Chlorinated solvents such as trichloroethene (TCE) and tetrachloroethene (PCE) are widespread groundwater contaminants often released as dense nonaqueous phase liquids (DNAPLs).

Reduction of TCE to cDCE led to a higher rate of chlorinated ethene removal from the cores, likely due to higher concentration gradients, along with lower sorption and a higher diffusion coefficient for cDCE relative to TCE.
