In this paper, we introduce Multi-Objective Parametric Query Optimization (MPQ) and describe and analyze corresponding query optimization algorithms; MPQ generalizes and unifies the cost models of MQ and of PQ at the same time by representing the cost of a query plan as vector-valued function  $c : R^n$ !

Abstract. Model based multi-parametric programming provides a complete map of solutions of an optimization problem as a function of, unknown but bounded, parameters in the model, in a computationally efficient manner, without exhaustively enumerating the entire parameter space.

multi-parametric optimization has been utilized for the EDM of Inconel-718 using hexagonal profile tool electrode made up of Copper. The peak current, pulse on Time ( $T_{on}$ ) and pulse of time ( $T_{off}$ ) were selected as process constraints to

In this paper, we present a novel global optimisation approach for the general solution of multi-parametric mixed integer linear programs (mp-MILPs). We describe an optimisation procedure which iterates between a (master) mixed integer nonlinear program and a (slave) multi-parametric program.
