We start by introducing two essential notions: number field and algebraic integer. Definition 1.1. A number field is a finite field extension  $K$  of  $\mathbb{Q}$ , i.e., a field which is a  $\mathbb{Q}$ -vector space of finite dimension. We note this dimension  $[K:\mathbb{Q}]$  and call it the degree of  $K$ . Examples 1.1. 1. The field  $\mathbb{Q}(\sqrt{2}) = \{x+y\sqrt{2} \mid x,y \in \mathbb{Q}\}$  is a number field.

### **Introduction to Algebraic Number Theory**

A Friendly Introduction to Number Theory is an introductory undergraduate text designed to entice non-math majors into learning some mathematics, while at the same time teaching them how to think mathematically. The exposition is informal, with a wealth of numerical examples that are analyzed for patterns and used to make conjectures.
